PROFESSIONAL SUMMARY

Full-stack developer with a MERN foundation and recent hands-on experience shipping reviewed changes to a production research database. Delivered SQL migrations, Python scripts, and TypeScript updates that improved data quality, including guarded repairs that cleaned 100+ invalid records and investigations that classified hundreds of source-link issues. Combines practical problem-solving from a decade in construction with a proven ability to learn tools quickly and contribute in real production environments.

TECHNICAL SKILLS

Core:	JavaScript, React, Node.js, Express, MongoDB, HTML, CSS
Data:	SQL, PostgreSQL, Supabase
Tools:	Git, GitHub (pull requests & code review), VS Code, Plane, Slack
Familiar:	Python, TypeScript, Redux, Tailwind CSS, responsive design

EXPERIENCE

Banyan Labs | Software Developer Trainee Oct 2026 | Remote

- Shipped reviewed pull requests to a production Supabase/PostgreSQL research database, contributing across the full stack in an agile sprint environment.
- Implemented AI scan status and error tracking through a coordinated SQL migration, Python script, and TypeScript type updates; clearly separated failed scans from empty results, backfilled existing records, and documented a production safeguard.
- Hardened two data-promotion SQL scripts with URL-pattern validation and rollback-safe dry runs, blocking non-URL text from entering link fields.
- Wrote complex read-only SQL (CTEs, CASE expressions, window functions, joins) to classify 251 invalid source links and identify 64 records that relied solely on a page title; shared the queries and findings with the team.
- Executed a guarded production repair of malformed URLs using row-count checks and automatic rollback, cleaning 103 invalid bio links and generating a source-link coverage report.

Absolute Masonry and McKoin Concrete | Construction and Concrete 2010–2021 | Tennessee

- Built residential foundations and concrete features, prepared sites, and finished concrete work while maintaining measurement accuracy, safe tool use, and crew coordination to complete projects on schedule.

PROJECTS

Hero Archive | Full-stack multi-publisher character catalog · Live demo · Frontend · Backend

- Built a full-stack application with search, detailed character profiles, Supabase-backed favorites, and a stat-based Battle mode. Implemented responsive React frontend, Node/Express backend, and real-time Supabase integration for user data and authentication.

The Orrery | React planetary and natal-chart dashboard · Live demo · Source

- Developed a React dashboard for planetary positions and natal charts with timezone-aware birth-time conversion. Integrated private Supabase storage for user data persistence and secure access.

EDUCATION AND CERTIFICATION

Persevere | Full-Stack Web Development Certification June 17, 2026 | Mountain City, TN

High School Diploma | Lavergne High School Lavergne, TN
